OCRE receives funding from the European Union's Horizon 2020 research and innovation programme under grant agreement no. 824079.

Open Clouds for Research Environments

Will stimulate the adoption of commercial cloud and Earth Observation (EO) services by the European research community.

As part of the European Open Science Cloud.

Through a tender resulting in framework agreements with suppliers, which research institutions can use to buy resources. By making available 9.5 million EURO in cloud adoption funds from the EC for the research community to use.

Why OCRE?

- Cloud and Earth Observation (EO) based services offer the European Research community a wealth of powerful tools.
- But for many researchers, these are currently out of reach.
 - It is difficult to find and select suitable services.
 - Establishing agreements with providers and ensuring legal and technical compliance requires specialist skills and takes an inordinate amount of time.
- Equally, service providers have difficulty reaching and meeting the needs of the research community in
 - technical,
 - financial and legal areas.

Open Clouds

Environments

RESEARCHERS

Easy adoption

Incorporate commercial digital services into their activities

Service discovery and acquisition

SERVICE PROVIDERS

Easy delivery

Reach and meet the needs of the research community

Meet legal, financial and technical requirements

OCRE will drive adoption of digital services and close the gap between the supply and demand sides

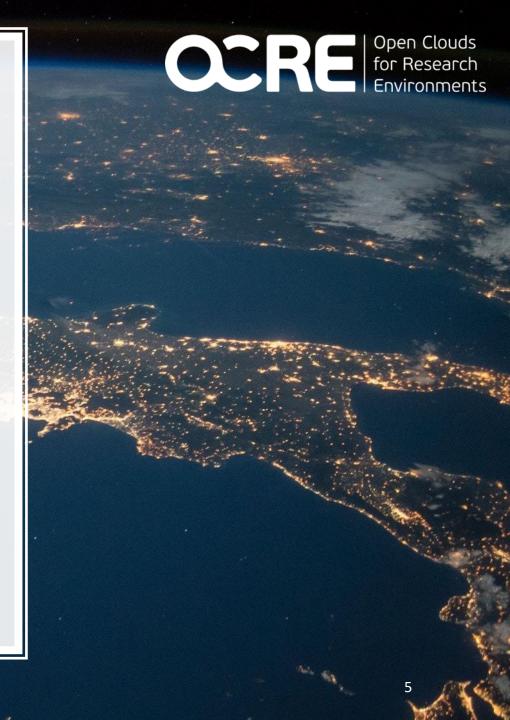

Scope

laaS, PaaS and SaaS cloud offerings.

Earth Observation services, which leverage EU DIAS platforms (Data and Information Access Services), where the Copernicus sentinel data is stored.

EO applications domain

- Agriculture
- Air pollution
- Atmosphere
- Biosphere
- Climate Change
- Coastal management
- Cryosphere
- Forestry

- Food Security
- Geo Hazard
- Health
- Hydrology
- Land
- Oceanography
- Water management
- Urban

Data Sharing/Publication

Interactive development

Powered by a scalable collocated processing environment - DIAS

Why it's interesting to move EO services into DIAS

- No need to update and maintain Copernicus Satellite data catalogue.
- Fast data access as data is locally accessible.
- Virtually unlimited computing resources available (CPUs, GPUs, virtualized environments, bare metal services)
 - Parallelise several requests
 - Optimisation on resources
 - Scale resources as needed

Benefits for suppliers

Efficient route to market

Respond to 1 tender

Reach 10,000 institutions

Adoption funds: 9.5 million euro Open Clouds Environments

4.75M€ for IaaS, PaaS and SaaS & **4.75M€ for Earth Observation**

First batch of **500 KEURO** Expected **f**rom July 2019 onwards for researchers (users) who want to use the IaaS offerings available in the <u>GÉANT IaaS framework</u>.

Through vouchers

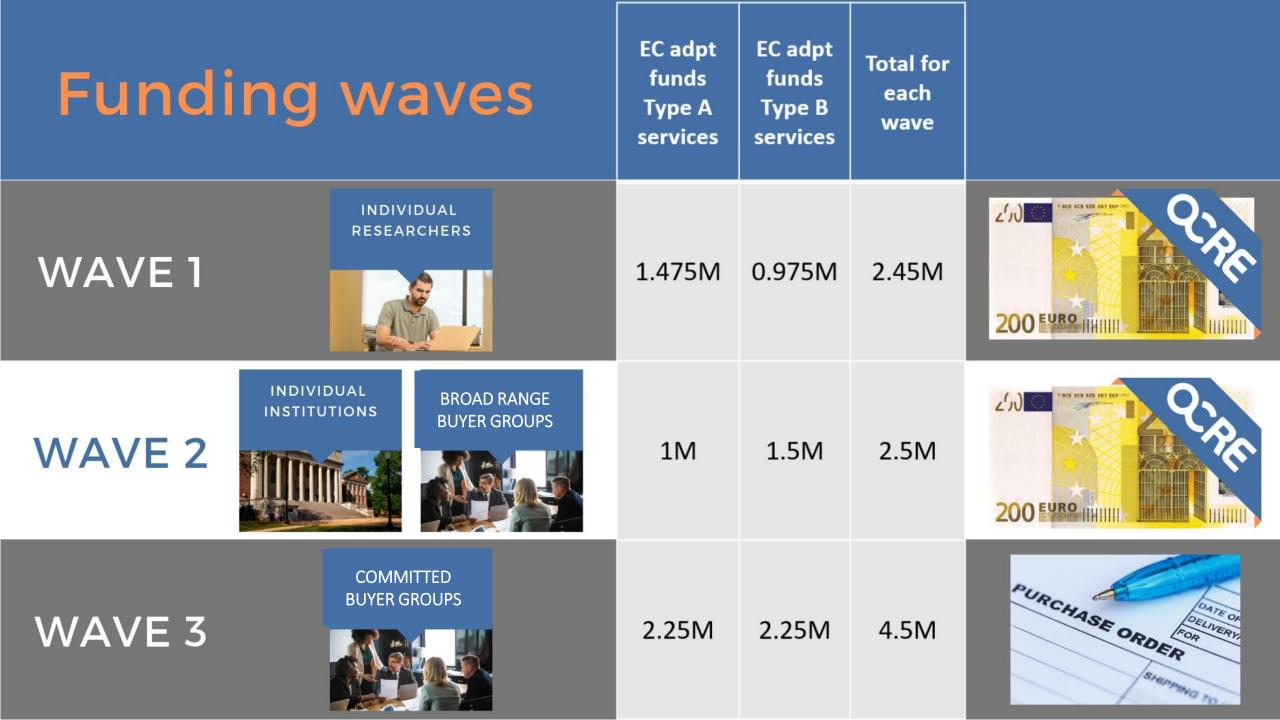

Vouchers distributed via organisations who represent or have access to researchers. First participating organisation is Eurodoc: *The European Council for Doctoral Candidates and Junior Researchers,* **9 MEUR** in 2020 – 2021 to be used at suppliers who have been awarded a framework agreement in the OCRE tender.

Multi-tier approach: vouchers for researchers, institutions & buyer groups.

OCRE USER CATEGORIES

INDIVIDUAL RESEARCHERS INDIVIDUAL INSTITUTIONS GROUP OF INSTITUTIONS (BUYER GROUPS)

Vouchers model

Separates:

- **payments** for cloud resources OCRE, as custodian of the adoption fund, will buy the cloud resources from providers.

usage of these cloud resources
Researchers will use the services at the providers, with
the providers reporting to OCRE about usage.

Creates a situation where:

a. cloud and Earth Observation services are free-atthe-point-of-the-user;

b. 'the long-tail-of-science', individual researchers, are enabled to use cloud services.

Hence, the use of commercial cloud services by the European research community is increased.

Vouchers management

- Technical platform to provide vouchers and track uptake and usages
- Simple web API to collect information from providers

Explore different usage models

Expected tender requirements

- Compliance with EU data protection law, including GDPR.
- Ready-to-use agreements, which include purchasing and payment models that match the financial structures and funding in research institutions, such as: acquiring services with a purchase order, postpaid billing and accommodating capital expenditure through upfront commitments.
- Reduction of network traffic charges, through suppliers' connections to the GÉANT network.
- Identity management, single sign-on capabilities
- (ISO) certifications: cloud specific features, security, interoperability, exit support, environmental, financial and service level agreements, IT service management.
- Report resource usage to OCRE.
- Customer adoption support.
- License management and migration. Transfer of existing licenses to the cloud.
- Data portability, interoperability and open standards.

Tender input

- Research community
- European Open Science Cloud (EOSC-Hub WP12)
- Research Data Alliance
- FAIR data principles, to make data findable, accessible, interoperable and reusable
- Identity management and single sign-on: AARC2 project
- OpenEO and the ESA EO Exploitation Platform Common Architecture projects
- GÉANT laaS and HNSciCloud tenders
- Specific context of 2 service types under procurement

Tender results

Tender results in **framework agreements** with suppliers who meet the tender requirements. Not 1 winner takes all. Portfolio of services. GÉANT will sign the framework agreements with the suppliers, valid for 4 years.

Entities identified in the tender are eligible to use these framework agreements: to buy resources, via call-off agreements. This can involve a mini-competition procedure.
